## PROFESSIONAL SUMMARY

AI/ML Engineer with 2+ years of production experience in Generative AI, Agentic systems, NLP, and Computer Vision. Built and deployed a LangGraph multi-agent RAG assistant with NLP-driven query classification that handles multi-turn conversational interactions, cutting document retrieval time from 20+ minutes to under 10 seconds and reducing support ticket volume by 60%. Hands-on across the full pipeline: LLM orchestration, prompt engineering, vector and graph retrieval, conversational flow design, CV model training, REST API deployment, and GCP-based infrastructure.

## TECHNICAL SKILLS

**LLMs, Agents & NLP:** LangGraph, LangChain, RAG, ReAct Agents, Tool-Use / Function Calling, Prompt Engineering, NLP (Query Classification, Intent Detection), Multi-Turn Conversational Flow Design, LangSmith, Pydantic

**ML & Vision:** PyTorch, TensorFlow, YOLO, Faster R-CNN, CNNs, Fine-tuning, Hugging Face Transformers, OpenCV

**Data & Retrieval:** Neo4j (Cypher), ChromaDB, Vector Search, MongoDB Atlas, MySQL, AWS S3

**Backend & Deploy:** FastAPI, REST APIs, JWT / OAuth 2.0, Docker, Git, GitHub, Python

**Cloud & Platform:** GCP (Discovery Engine, Document AI, Cloud Storage)

## PROFESSIONAL EXPERIENCE

### SprintPark — AI/ML Engineer

Hyderabad, India | 2024 – Present

**JAMM – Enterprise AI Knowledge Assistant** *LangGraph · LangChain · Gemini · NLP · Document AI · ChromaDB · GCP · OAuth 2.0*

- Designed a LangGraph state-machine with a supervisor agent routing queries to specialized sub-agents (HR policy, SOP retrieval, document Q&A) — reducing retrieval time from 20+ minutes to under 10 seconds across 500+ weekly queries.
- Built ReAct-style tool-use agents that select retrieval strategy at inference time (ChromaDB vector search, graph traversal, GCP document fetch) using NLP-based query classification and intent detection — cutting support ticket volume by 60%.
- Integrated GCP Document AI for PDF parsing and LangSmith for agent call tracing, latency monitoring, and prompt debugging; secured endpoints with OAuth 2.0.
- Persisted agent conversation state using LangGraph memory, enabling coherent multi-turn conversational flows without refetching context.

**Data Center Image Intelligence System** *YOLO · Faster R-CNN · PyTorch · OpenCV · FastAPI · Docker*

- Trained a YOLO + Faster R-CNN pipeline to detect and classify data center hardware (switches, cables, ports, rack units) — reducing manual review from 30–40 minutes to under 3 minutes (90% reduction).
- Built a confidence-threshold feedback loop that flags low-certainty detections for human review and queues them for incremental retraining, reducing manual model update cycles.
- Containerized the inference service with Docker and deployed via FastAPI REST endpoints, integrating with network administration tooling used by the ops team.

## KEY PROJECTS

**Agentic Document Workflow Engine** *LangGraph · LangChain · Gemini · NLP · ChromaDB · Pydantic*

- Built a LangGraph multi-agent pipeline with distinct planner, retriever, validator, and responder agents, each handling a specific stage of document query resolution with retry logic and structured JSON output via Pydantic.
- Implemented function-calling agents that dynamically choose between vector search, keyword retrieval, and graph traversal based on real-time NLP query classification.

**Neo4j Survey Knowledge Graph** *Neo4j · Cypher · Python · Graph Data Modeling*

- Modeled enterprise survey questionnaires as a Neo4j graph with nested conditional flows and decision trees as typed nodes and relationships; Cypher traversal queries outperformed equivalent recursive SQL joins on nested paths.

## EDUCATION

### B.Tech in Computer Science and Engineering

2019 – 2023

Impact College of Engineering and Applied Sciences, Bengaluru
